

LINUX COMMANDS

1. How to check current location - **pwd**
2. How to display current logged-in user - **whoami**
3. How to check system date and time - **date** or **date "+%Y/%m/%d"**
4. How to display files and directory present in current location -> **ls -l** or **ls -lh** (human readable format).
5. How to clear the linux terminal - **clear**

Creating, Editing And Deleting Commands

1. How to display content of a file in terminal - **cat <filename>**
2. How to read file and search keyword in a file - **less <filename>** (/keyword to be find)
3. How to go bottom in a file in linux - **Shift + G**
4. How to search from bottom to top - **? <keyword>**
5. How to view content of a file page by page - **more <filename>**
6. How to create files in linux - **touch <filename>**
7. How to delete a files in linux - **rm <filename>**
8. How to edit a file in linux - vim editor(**vim <filename>**) or nano editor (**nano <filename>**)
9. How to create a directory/folder in linux - **mkdir <directory-name>**
10. How to delete a directory/folder in linux - **rmdir <directory-name>** or **rm -rf <directory-name>**
11. How to change path/move to another folder in linux - **cd /path/path** or **cd ..**
12. How to copy and paste a file from one folder to another folder - **cp <file> /dest/folder**
13. How to copy a content of a file to another file in linux - **cp <file a> <file b>**
14. How to copy a file to a directory - **cp -R <file_name> /home/folder/directory_name**
15. How to cut - paste a file from one folder to another folder - **mv <file_name> /home/folder/directory_name**
16. How to rename a file in linux - **mv filename filenameewname**
17. How to read and display top 5 lines in linux - **head -5 filename**
18. How to read and display bottom 5 lines in linux - **tail -5 filename**
19. How to sort the file in linux - **sort filename** or **sort -r filename**
20. How to display unique content from a linux file - **sort filename | uniq**
21. How to split a file in 3 different files in linux - **split -l 3 filename**
22. How to search a word and display a matching content from a file in linux - **grep 'Alice' project.txt**
23. How to search multiple word and matching content from a file in linux - **egrep "Alice|Bob" project.txt**
24. How to shuffle a content of a file in linux - **shuff filename**
25. How to count number of lines in linux - **wc -l filename**
26. How to check two files are identical or not in linux - **cmp file1 file2**
27. How to compare and display the difference between two files in linux - **diff -u file1 file2**
28. How to find a file in linux - **find /path -name filename** or **find . -name filename**
29. How to find a file in linux - 1. do update the database - **updatedb** 2. **locate filename**

Utility Commands

-
1. How to display previously used commands in past - **history**
 2. How to check syntax and options available for commands - **help** or **command --help**
 3. How to read or get more information about a command - **man** or **man ls**
 4. How to check which executable used for a command - **which** or **which command** or **which find**
 5. How to check how long server has been running in linux - **uptime**
 6. How to record your activity in a file in linux - **script** (press **ctrl + D**) to exit from script
 7. How to create short-cut for long command in linux - **alias l = 'ls -l'** or **alias f='find'**

Zip And Unzip of Files/Folders Commands

1. How to compress a file in linux - **gzip -k filename**
2. How to decompress a file in linux - **gzip -d filename, gunzip filename**
3. How to compress a folder in linux - **tar -czf file.tar.gz directory_name/**
4. How to decompress a folder in linux - **tar -xzf directory_name/**
5. How to compress multiple files in one zipped file in linux - **zip myfile.zip file1 file2**
6. How to decompress multiple files - **unzip myfile.zip**
7. How to list all zipped files - **unzip -l myfile.zip**

Downloading From Internet Commands

1. How to download a file from internet - **wget URL_of_file** or **wget -o yourfilename.txt URL_of_file**

Package Management Commands

1. How to install an application in linux - **apt** or **yum/dnf**
2. How to check an application is installed or not - **rpm -qa | grep application**
3. How to list available packages to install on linux - **apt search <package_name>**

Service Control Commands

1. How to start/stop services in linux - **systemctl start/stop <service_name>**
2. How to list all services in linux - **systemctl list-units --type=service -all**
3. How to list all environment variable on linux - **printenv**

String Operation Commands (cut, sed, awk)

1. How to print a specific column in linux from a file - **awk '{print \$1}' filename**
2. How to print a specific column through delimiter in linux - **awk -f, '{print \$2}' filename** or **awk -F: '{print \$6}' /etc/passwd**
3. How to display starting two characters of all line - **cut -c 1-2 filename**
4. How to display a specific line in linux - **sed -n '5p' filename**
5. How to replace a specific word in file in linux - **sed 's/Alice/Vibhuti/g' filename**

6. How to extend or shrink size of a file - **truncate -s 100M file.txt**

Switch User Command

1. How to change user or login as a different user in linux - **su <username>**

SSH Login to Remote Server and SCP Copy file in remote server

1. How to access remote linux server - **ssh -l username <ip_address>**
2. How to copy a file to a remote linux server - **scp filename username@hostname:/tmp/**

Permission Access Commands

1. How to check permission in linux - **do ls -ltr (-rw- rw- --x)** this letter shows permission of file.
2. How to modify permission of a file - **chmod a+rw filename.txt** (Here u=user, g=group, o=other, a=all)
3. How to change ownership of file - **chown root filename.txt** or **chown ubuntu filename.txt**
4. How to change group ownership of file - **chgrp vibhuti filename.txt**

Memory Info Command

1. How to check free RAM space - **free -h**
2. How to check % memory and CPU utilization - **top**
3. How to check disk utilization or check how much disk a file contain - **du -h**
4. How to check filesystem available and disk space allocation - **df -h**

System Info Commands

1. How to check hostname of your linux server - **hostname**
2. How to check CPU info of your linux server - **lscpu**
3. How to check type of architecture of your linux server - **arch**
4. How to see of storage devices, disk partition on your linux server - **lsblk**
5. How to see OS name of your linux server - **uname -a**

Networking Commands

1. How to check IP address of your server - **ifconfig**
2. How to check if server website is accessible or not - **ping www.google.com**
3. How to check IP:PORT is accessible and open or not - **telnet IP port**
4. How to check port is open or not on your server - **netstat -putan | grep 80**
5. How to check all hubs in network path to reach in website - **traceroute**
6. How to restart our linux server - **reboot**
7. How to shutdown linux server - **shutdown**

User Management Command

1. How to create a new user on linux server - **useradd username**
2. How to change password of user on linux server - **passwd username**
3. How to create a new group on linux server - **groupadd <groupname>**
4. How to check user ID or group ID on linux server - **id user**
5. How to delete user or group on linux server - **userdel <username> or groupdel <groupname>**
6. How to schedule a script to run a particular date and time - **at or crontab**
